

Review the whole product decision - not only the local design.

ARCHITECTURE-TO-FIELD INTEGRITY REVIEW

REVIEW IDENTITY

DECISION / PRODUCT

Name: _____ Owner: _____ Horizon: Concept / Prototype /
 Verification / Launch / Field change / Reliability

01 | CLINICAL INTENT

OUTCOME AND CONSEQUENCE

Whose work or outcome changes? What medication, patient, pharmacy, nursing, or technician consequence must be controlled? Evidence / user context:
 _____ Acceptance logic: _____

02 | PLATFORM ARCHITECTURE

BOUNDARY AND OWNERSHIP

What becomes common, configurable, isolated, or product-specific? Who owns each interface? Boundary / owner:
 _____ Compatibility consequence: _____

03 | MECHANISM + SOFTWARE

COUPLING AND RECOVERY

Where do mechanics, sensing, control, software, data, and cloud behavior couple? What can fail and how is it observed? Critical tolerance / failure mode:
 _____ Observability / recovery: _____

Evidence, industrialization, and field learning

COMPLETE THE TOLERANCE STACK

04 | VERIFICATION EVIDENCE

VERIFICATION EVIDENCE

What release scope is supported? Which representative conditions, regressions, traceability, and residual risks matter? Minimum evidence / constraint: _____ Owner / review date: _____

05 | INDUSTRIALIZATION

INDUSTRIALIZATION

Can the system be built, sourced, installed, configured, trained, and serviced repeatedly? Minimum evidence / constraint: _____ Owner / review date: _____

06 | SERVICE LEARNING

SERVICE LEARNING

How will field signal be detected, normalized, reproduced, contained, and reused? Minimum evidence / constraint: _____ Owner / review date: _____

ACCUMULATED TOLERANCE STATEMENT

The decision is most sensitive to _____ because _____. The downstream function carrying the largest unclosed consequence is _____.

Decision resolution and authority contract

PROCEED, BOUND, HOLD, OR ESCALATE

RELEASE POSTURE

PROCEED

Evidence and downstream readiness support the intended scope.

BOUND

Advance within explicit configuration, site, volume, or monitoring limits.

HOLD / ESCALATE

Critical evidence, authority, or downstream readiness is unresolved.

DECISION RECORD

DECISION

RATIONALE

MINIMUM EVIDENCE

RESIDUAL RISK

RELEASE SCOPE / BOUNDS

NAMED OWNERS

ESCALATION TRIGGER

RECOVERY / ROLLBACK

AUTHORITY QUALITY CHECK

- Decision owner is explicit.
- Contributors and consulted functions are represented.
- Local teams retain appropriate authority.
- Executive escalation is reserved for a real threshold.
- Evidence can change the decision.
- Reversibility and recovery are understood.

Field-learning and reuse contract

MAKE THE DECISION COMPOUND

OBSERVE AND RESPOND

OBSERVE

What field, build, service, quality, or workflow signal should move?
Signal + unit: _____ Baseline /
assumption: _____ Review date: _____

RESPOND

Who evaluates the signal and what action threshold applies? Owner: _____
Threshold: _____
Containment: _____

REUSE A VERIFIED LESSON

PRODUCT SYSTEM

- ☐ Architecture principle
- ☐ Interface contract
- ☐ Design standard

EVIDENCE SYSTEM

- ☐ Verification case
- ☐ Regression suite
- ☐ Failure-mode library

OPERATING SYSTEM

- ☐ Manufacturing control
- ☐ Supplier control
- ☐ Installation / configuration

SERVICE AND PEOPLE

- ☐ Service playbook
- ☐ Training / coaching
- ☐ Customer communication

Review quality, sign-off, and next evidence

COMPLETE THE TECHNICAL CONTRACT

WHOLE-PRODUCT INTEGRITY

- Clinical and workflow value remained visible.
- Common-platform and product-specific choices were explicit.
- Verification matched the actual release scope.
- Build, install, service, and recovery consequences were represented.
- Authority and escalation thresholds are named.
- Field evidence can change a future product or architecture decision.

SIGN-OFF

TECHNICAL AUTHORITY	DATE
PRODUCT / PROGRAM	NEXT REVIEW
QUALITY / RELEASE	EVIDENCE OWNER
MANUFACTURING / SERVICE	DECISION RECORD

NEXT EVIDENCE CYCLE

Next signal to inspect: _____ Next evidence owner:

_____ Next decision date:

USE BOUNDARY

This is an independent candidate discussion artifact. It is not an Omnicell procedure, quality record, release authorization, or description of undisclosed internal process.
