Days 61-120 | Prove and institutionalize

USE EVIDENCE FROM LIVE WORK

DAYS 61-75 | REVIEW A NEXT-GENERATION CONCEPT

Run the Integrity Review; clarify outcome, architecture boundary, novelty, failure modes, evidence, build/service burden, and learning plan. Deliver a resolved, bounded, held, or escalated decision.

DAYS 76-90 | CLOSE A RELIABILITY-LEARNING LOOP

Normalize a recurring field signal; distinguish service variation, product defect, interface weakness, and architecture debt; connect containment, reproduction, root cause, corrective action, and recurrence test.

DAYS 91-105 | ALIGN PORTFOLIO PRIORITIES

Review roadmap choices through innovation value, platform leverage, reliability burden, technical debt, supply risk, commercialization readiness, and capacity implications.

DAYS 106-120 | LOCK NEXT OPERATING CYCLE

Refine the mechanism from user feedback; set next-quarter priorities and owners; publish decision rules and evidence expectations in systems teams already use.

DAY-120 TEST

- Are important technical decisions faster or merely more documented?
- Can teams explain why a decision was made and what evidence would change it?

Reeecur, Quajabi, Manunteitecur, ade Ssh servseefine sameage,ease positec?TEST
